Curriculum Guide Introduction

This curriculum guide provides an overview of a Post-Master’s Advanced Certificate in Gerontology, a Post-Master’s program of the Adult-Gerontology Primary Care Nurse Practitioner Program, developed by the Hartford Institute for Geriatric Nursing at New York University Rory Meyers College of Nursing. Interprofessional education and practice content was implemented in collaboration with New York University School of Medicine’s Primary Care Residency Program.

The Post-Master’s Advanced Certificate in Gerontology is most applicable for (1) adult nurse practitioners who need the gerontology content to meet eligibility requirements for the national Adult-Gerontology Primary Care certification exam; (2) nurse practitioners who want to further their ability to provide comprehensive interprofessional primary care to older adults with multiple chronic conditions; and (3) nurse practitioners who want to further their knowledge in gerontology.

The program provides nurse practitioners in primary care with the ability to (1) have advanced knowledge and skills in the management of complex, frail, community dwelling older adults with multiple chronic conditions, and (2) implement effective care for this growing population within a high functioning, interprofessional team that utilizes evidence-based practice to achieve quality outcomes. The curriculum incorporates Interprofessional Education and Practice (IPEP) online modules to provide clinicians with information about caring for older adults in interprofessional teams.

This program addresses a need for adult nurse practitioners prepared in care of adults prior to the adoption of The Consensus Model for APRN Regulation: Licensure, Accreditation, Certification & Education (LACE) endorsed in 2008 by 48 nursing organizations including ANCC, AANP, American Nurses Association (ANA), National Organization of Nurse Practitioner Faculties (NONPF), Gerontological Advanced Practice Nurses Association (GAPNA), National Gerontological Nursing Association (NGNA), Commission on Collegiate Nursing Education (CCNE), National League for Nursing (NLN), and American Association of Colleges of Nursing (AACN). The program provides adult nurse practitioners (ANPs) with the gap gerontology didactic and clinical content necessary for gerontological nurse practitioner (GNP) certification, as well as to meet eligibility criteria for the American Nurses Credentialing Center (ANCC) or American Association of Nurse Practitioners (AANP) Adult-Gerontology Primary Care Nurse Practitioner national certification exam. The program aligns competencies with the AACN Adult-Gerontology Primary Care Nurse Practitioner Competencies published in 2011.
Overview of Courses

The Advanced Certificate in Gerontology Program is a minimum one-year, 12-credit (4 courses) post-master's certificate program focusing on interprofessional primary care to older adults with multiple chronic conditions.

The 4 main courses are:
(1) **Advanced Pathophysiology, Pharmacotherapeutics, and Physical assessment for Older Adults** (fall semester);
(2) **Primary Care of the Older Adult with Multiple Chronic Conditions** (fall semester);
(3) **Primary Care of the Frail Older Adult with Multiple Chronic Conditions** (spring semester);
(4) **Clinical Intensive in Interprofessional Care of Older Adults** (one-week executive format course in the summer in New York City with medical residents at NYU School of Medicine).

A gap analysis is completed to make sure these courses would be sufficient for certification or if additional courses are needed (i.e. if someone never took pathophysiology as a course in the original ANP program, that person would also need to take the regular pathophysiology courses). There are approximately 250 precepted clinical hours in primary care gerontology, also based on GAP analysis, to be completed to meet competencies.
Advanced Pathophysiology, Pharmacotherapeutics, and Physical Assessment for Older Adults

Course Description

This course is designed to expand the advanced practice nurse’s knowledge of the pathophysiology, pharmacotherapeutics, and physical assessment of the common chronic health conditions of older adults. The aim is to support advance practice nurses to develop the expert knowledge, skills, and attitudes necessary to provide evidence-based care to older adults. Students will integrate their knowledge of pharmacology and pathophysiology with advanced pharmacotherapeutics and pathogenesis principles to improve patient outcomes. The components of a comprehensive geriatric assessment are integrated through the course. There is a focus on interprofessional treatment decision-making, including prescribing medications according to the best evidence for the prevention and treatment of common chronic diseases. Clinical exemplars designed to illustrate advanced physical assessment techniques, concepts, and approaches are presented during the course. The critical analysis of evidence from a variety of disciplines and its subsequent integration into interprofessional treatment plans will be emphasized.

Course Outcomes

1. Analyze the etiology and pathophysiological alterations associated with selected common chronic health conditions in older adults.
2. Apply principles of pathophysiology to the development, presentation, and diagnosis of common chronic diseases in older adults.
3. Utilize physiologic and pathogenic principles to explain clinical signs and symptoms of common chronic health conditions.
4. Interpret evidence from an interprofessional perspective related to the sensitivity, and specificity of relevant clinical physical exam findings in older adults.
5. Integrate components of a comprehensive geriatric assessment in holistically assessing older adults.
6. Integrate knowledge of advanced pathophysiology with advanced pharmacotherapy into interprofessional treatment plans to promote improved patient care outcomes for older adults.
7. Apply physiologic and pathogenic concepts relevant to advanced practice interventions for older adults.
8. Critically appraise the evidence to determine the value of a therapeutic agent with respect to safety, adverse effects, efficacy, cost, and resources in order to meet patient-
centered outcomes for older adults.

9. Demonstrate knowledge about pathophysiology, pharmacotherapy, and physical assessment related to pediatric populations*.
   *If applicable based upon transcript gap analysis.

This is a three-credit course. Each week you will be expected to spend approximately (1) one hour reviewing content related to the topic(s) of the week; (2) one hour reviewing the PowerPoint(s) and Podcast(s) on NYU Classes; and (3) one hour on the online discussion board. Students are expected to integrate concepts from all areas of study.
Discussion board/Online Forum:
Grade will be based upon active participation, development of good questions based on class content and clinical relevance, evidence-based responses to posed questions and/or cases from faculty, as well as answering questions completely. It is a forum to discuss common important themes from the weekly topic and meant to support a “classroom community”. All students must participate in the discussion board with a minimum of two posts per week. A rubric to guide criteria for posts and grading procedures are available on NYU Classes under "Assignments".
Grading criteria: The online discussion forums (10 total) will be graded individually by the following scoring system.
- High quality = 8-10 points
- Moderate quality = 4-7 points
- Low quality = 1-3 points

Paper:
Critique an evidence-based clinical practice guideline to be used in a primary care clinical setting at the advanced practice level. Include the relevance of the health care issue to the care of older adults; definition and etiology; clinical features (signs and symptoms); relevance to pathophysiology, pharmacology, and physical assessment; evidence-based assessment tools; laboratory studies; differential diagnoses; treatment/management; possible complications; interprofessional roles; evaluation; and follow-up of the health care issue. Utilize and critique supporting literature. Maximum 10 pages.

Criteria for grading the paper:
10% Introduction/Abstract
20% Relevance to the topic and role of the advanced practice nurse
30% Body of paper, including incorporation of all required elements listed above, as well as logical flow of ideas and progression of thoughts
10% Use of research and technological resources: Used appropriately to reinforce ideas
15% Conclusion/Evaluation
10% References list: Appropriate use of the literature, current, and relevant
5% Grammar, spelling, presentation, APA format

If a paper is handed in late, the grade will be decreased by five points.
Primary Care of the Older Adult with Multiple Chronic Conditions

Course Description

This course will prepare nurse practitioners to provide patient-centered interprofessional primary care to older adults with multiple chronic conditions. This course integrates advanced practice nursing competencies with comprehensive assessment, diagnostic reasoning, and analysis of differential diagnoses in primary care. Students apply critical thinking and evidence-based clinical decision-making skills to develop, implement, and evaluate management plans for older adults residing in the community with acute and chronic health problems. Patient advocacy; health promotion; disease prevention; and physical, functional, and mental health assessment and management are emphasized. Caseload management, interprofessional collaboration, community resources, and consideration of diverse populations, older adults, family, caregivers, and staff are addressed.

Course Outcomes

1. Conduct comprehensive, patient-centered, interprofessional assessments for older adults.
2. Formulate differential diagnoses for actual and potential health problems for older adults based on pertinent subjective and objective data.
3. Prepare an evidence-based interprofessional management plan of primary care for older adults.
4. Deliver health teaching, health promotion, and preventive interventions for older adults with awareness of the patient’s health beliefs, taking into consideration pertinent demographic variables.
5. Identify risk factors and barriers to optimal health for culturally diverse older adults, their families, and their communities.
6. Demonstrate integration of interprofessional competencies in planning, implementing, and evaluating patient-centered primary care for older adults.
7. Analyze the literature for the best available evidence and technological resources for formulating care plans, practice protocols, and outcome criteria.
8. Choose interprofessional local, regional and national resources that support clinical decision making, consultation, advocacy, and the health education needs of diverse older adult populations, their families, and caregivers.
9. Analyze legal, professional, and ethical issues influencing advanced nursing practice and the primary health care delivery of older adults.
10. Distinguish organizational strategies for promoting interprofessional collaboration.

The minimum passing grade for this course is B- (80-82).
This is a three-credit course with off-campus clinical hours and on-campus or virtual seminar hours. Each week you will be expected to spend approximately (1) one hour reviewing content related to the topic(s) of the week; (2) one hour reviewing the PowerPoint(s) and Podcast(s) on NYU Classes; and (3) one hour on the online discussion board. At clinical agencies, students implement the advanced practice role under the guidance of clinical preceptors. Faculty will meet with students and preceptors at clinical agencies to observe and facilitate student-preceptor experiences. Practice settings include outpatient ambulatory care facilities, clinics, older adults’ homes, and skilled nursing facilities. Students will be assigned a nurse practitioner or physician preceptor for the clinical practicum. Students will work with their preceptors to assess and provide patient-centered primary care and follow-up to older adults, families, caregivers, and community groups. In seminars and discussion boards, facilitated by faculty, students integrate concepts from all areas of study.

Students are formally evaluated at mid-term and at the end of the term. Students must receive a passing evaluation by their preceptors to pass this course. Students complete the same evaluation form as their preceptors (self-evaluation). The evaluations must be handed into the course faculty for review on the dates designated. For students who have more than one preceptor, each preceptor will complete an evaluation form; the student completes only one self-evaluation form. Midterm evaluations are due HALF WAY THROUGH THE REQUIRED HOURS. Final evaluations are due upon completion of clinical component.

Case Studies:
Complete any 4 case studies from The APRN Resource Center - The Case Studies. https://consultgeri.org/education-training/e-learning-resources. Submit copy of submitted exam responses with rationales by the due date (scan and email).

Interprofessional Education and Practice (IPEP) Online Modules and Virtual Patients:
Links to the modules/virtual patients will be provided. As part of the IPEP online modules for this course, you need to develop interprofessional care plans for two virtual patients. Completing the IPEP modules and two virtual patient cases is mandatory for passing this course.

Discussion board/Online Forum:
Grade will be based upon active participation, development of good questions based on class content and clinical relevance, evidence-based responses to posed questions and/or cases from faculty, as well as answering questions completely. It is a forum to discuss common important themes from the weekly topic and meant to support a “classroom community”. All students must participate in the discussion board with a minimum of two posts per week. A rubric to guide criteria for posts and grading procedures are available on NYU Classes under "Assignments".
Grading criteria:
The online discussion forums (10 total) will be graded individually by the following scoring system:

- High quality = 8-10 points
- Moderate quality = 4-7 points
- Low quality = 1-3 points
Primary Care of the Frail Older Adult with Multiple Chronic Conditions

Course Description

This course will prepare nurse practitioners to provide patient-centered interprofessional primary care to frail older adults with multiple chronic conditions. This course integrates advanced practice nursing competencies with comprehensive assessment, diagnostic reasoning, and analysis of differential diagnoses in primary care and long term care. Students apply critical thinking and evidence-based clinical decision making skills to develop, implement, and evaluate management plans for older adults residing in the community and long term care settings with acute and chronic health problems. Patient advocacy; health promotion; disease prevention; and physical, functional, and mental health assessment and management are emphasized. Emphasis will be placed on caseload management, interprofessional collaboration, community resources, and consideration of diverse populations, frail older adults, family, caregivers, and staff.

Course Outcomes

1. Conduct comprehensive, patient-centered, interprofessional assessments for frail older adults.
2. Formulate differential diagnoses for actual and potential health problems for frail older adults based on pertinent subjective and objective data.
3. Design an evidence-based interprofessional management plan of primary and long term care for frail older adults.
4. Deliver health teaching, health promotion, and preventive interventions for frail older adults with awareness of the patient’s health beliefs, taking into consideration pertinent demographic variables.
5. Prioritize risk factors and barriers to optimal health for culturally diverse frail older adults, their families, and their communities.
6. Appraise integration of interprofessional competencies in planning, implementing, and evaluating patient-centered primary care for frail older adults.
7. Critically appraise the literature for the best available evidence and technological resources for formulating care plans, practice protocols, and outcome criteria.
8. Integrate local, regional and national interprofessional resources that support clinical decision making, consultation, advocacy, and the health education needs of diverse frail older adult populations, their families, and caregivers.
9. Synthesize legal, professional, and ethical issues influencing advanced nursing practice and the primary health care delivery of frail older adults.

The minimum passing grade for this course is B- (80-82).
**Discussion Board:**
Grade will be based upon active participation, development of good questions based on class content and clinical relevance, evidence-based responses to posed questions and/or cases from faculty, as well as answering questions completely. It is a forum to discuss common important themes from the weekly topic and meant to support a “classroom community”. All students must participate in the discussion board with a minimum of two posts per week. A rubric to guide criteria for posts and grading procedures are available on NYU Classes under "Assignments".
Grading criteria: The online discussion forums (10 total) will be graded individually by the following scoring system.
- High quality = 8-10 points
- Moderate quality = 4-7 points
- Low quality = 1-3 points

**PICO Project:**
Prepare a manuscript answering a clinical/research question using evidence-based practice. Components of a clinical question using the PICO format include: (1) Population: The individual or group of individuals with a particular health care condition or problem; (2) Intervention: The particular health care condition or problem of interest (therapeutic, preventive, diagnostic, organizational intervention); (3) Comparison intervention: Standard care or no intervention; and (4) Outcome: More effective outcome.

The manuscript must contain the following elements:
- Significance of the topic (gap, conflict in the literature; need to extend knowledge base, crucial health care issue, magnitude of the problem, relationship to interprofessional care)
- Background, including population of interest
- Purpose of the paper
- Search strategies
- Critique of the literature (randomized clinical trials, meta-analysis, descriptive, prospective, observational studies, quantitative/qualitative studies, etc...)
- Discussion of the quality of the evidence available in the literature
- Level of confidence on the evidence available in the literature
- Synthesize the evidence related to strategies to close the gap or to resolve the conflict (i.e. recommendation for further study needed, type of study needed, etc...)
- Synthesis of overall strengths and weaknesses of the research evidence
- Based on the evidence from the literature, discuss recommendations for change that may be suggested for interprofessional clinical practice, public policy, and/or research

**Criteria for grading the project:**
- 10% Introduction/Abstract
- 30% Significance of the topic/question and relationship to interprofessional care
35%  Body of paper, including incorporation of all required elements listed above, as well as logical flow of ideas and progression of thoughts
15%  Recommendations about applicability to interprofessional clinical practice and conclusion
5%   References list: Appropriate use of the evidence-based literature, current, relevant
5%   Grammar, spelling, presentation, APA format (unless using format required by the editor of a specific journal)

If a paper is handed in late, the grade will be decreased by five points.
Clinical Intensive in Interprofessional Care of Older Adults

Course Description

This clinical intensive course will prepare nurse practitioners to provide patient-centered primary care to older adults with multiple chronic conditions with interprofessional team members. This course uses an interprofessional framework to develop advanced practice nursing competencies in comprehensive assessment, diagnostic reasoning, and analysis of differential diagnoses in primary care. Students apply critical thinking and evidence based clinical decision making skills to develop, implement, and evaluate management plans for older adults residing in the community with acute and chronic health problems including end of life care issues. Emphasis is placed on transitional care, interprofessional collaboration, community resources, and consideration of diverse populations, older adults, family, caregivers, and staff.

Course Outcomes

1. Conduct comprehensive, patient-centered, interprofessional assessments for older adults.
2. Formulate differential diagnoses for actual and potential health problems for older adults based on pertinent subjective and objective data.
3. Develop an evidence-based interprofessional management plan of primary care for older adults.
4. Deliver health teaching, health promotion, and preventive interventions for older adults with awareness of the patient’s health beliefs, taking into consideration pertinent demographic variables.
5. Examine risk factors and barriers to optimal health for culturally diverse older adults, their families, and their communities.
6. Integrate principles of transitional care in interprofessional clinical practice.
7. Demonstrate integration of interprofessional competencies in planning, implementing, and evaluating patient-centered primary care for older adults.
8. Evaluate the literature for the best available evidence and technological resources for formulating care plans, practice protocols, and outcome criteria.
9. Choose local, regional and national interprofessional resources that support clinical decision making, consultation, advocacy, and the health education needs of diverse older adult populations, their families, and caregivers.
10. Evaluate legal, professional, and ethical issues influencing advanced nursing practice and the primary health care delivery of older adults.

- General Assessment Series
- Specialty Practice Series (co-sponsored with Nursing Specialty Organizations)
- Quality Improvement Series
- Dementia Series (mostly co-sponsored with the Alzheimer’s Association)

How to Try This® Series: A John A. Hartford Foundation-funded project provided to the Hartford Institute for Geriatric Nursing at New York University’s Rory Meyers College of Nursing in collaboration with the American Journal of Nursing, translates the evidence-based geriatric assessment tools in the Try This® series into cost-free, web-based resources including demonstration videos, and a corresponding print series featured in the AJN, developed to build geriatric assessment skills. Videos can be watched in their entire format, or in chapters that relate to the specific assessment skills described above. http://consultgeri.org/tools/try-this-series and www.nursingcenter.com/AJNolderadults

Interprofessional Education and Practice (IPEP) Modules

The Interprofessional Education and Practice (IPEP) online modules, developed by faculty at the Hartford Institute for Geriatric Nursing at NYU Rory Meyers College of Nursing and NYU School of Medicine Primary Care Residency Program, provide clinicians with information about caring for older adults in interprofessional teams. These modules are based on the NYU3T: Teaching, Technology, and Teamwork curriculum funded by the Josiah Macy Jr. Foundation, as well as work from the original Geriatric Interdisciplinary Team Training (GITT) Program funded by the John A. Hartford Foundation. The NYU3T undergraduate level, acute care-based modules were enhanced in the IPEP modules to focus on the interprofessional primary care to older adults for clinicians at the graduate and post-graduate level in various disciplines. The Interprofessional Education and Practice (IPEP) Modules and Virtual Patients are additionally funded by a grant from the Division of Nursing (DN), Bureau of Health
The first six modules focus on various aspects of interprofessional education, including content from the Core Competencies for Interprofessional Collaborative Practice sponsored by the Interprofessional Education Collaborative (IPEC). Interprofessional collaboration, education, and training of medical residents, fellows, nurse practitioners and other health professions providers focus on the IPEC Competency Domains: (1) Values/Ethics for Interprofessional Practice; (2) Roles/Responsibilities; (3) Interprofessional Communication; and (4) Teams and Teamwork. The modules are: (1) Roles and responsibilities in health care team settings, including content on discipline training and licensure; (2) Effective health care teams, including content on facilitators and barriers within teams; (3) Teamwork skills, including leadership strategies; (4) Effective communication skills and techniques; (5) Conflict resolution, including content on mutual support for task assistance, assertion, and feedback; and (6) Interprofessional care planning, including identifying person, family, and caregiver issues, examining diverse perspectives, defining goals of care, clarifying roles and tasks, and debriefing. Additional modules are graduate level, primary care-based virtual patients for primary health care trainees and/or providers to complete and then discuss as an interprofessional team.

Each module takes 10-15 minutes to complete and includes the assessment and management of older adults with multiple chronic conditions in an interprofessional manner. The goal of the collective modules is to increase the number of advanced practice nurses, medical residents, other physicians and care providers with gerontological competencies and interprofessional expertise to enhance person-oriented primary care to complex older adults with multiple chronic conditions, as well as their families and caregivers.
